

Freedom Fighter Manual
fifth edition

livingfreedom

2024

For every libertarian, anarchist, and (in general) human being wanting to fight for his/her freedom.

This paper mostly consists of quotations and information from the following texts:
"Secret Freedom Fighter: Fighting Tyranny Without Terrorizing the Innocent" - Jefferson Mack
"An Agorist Primer" – Samuel Edward Konkin III
'Counter-Economics: From the Back Alleys to the Stars' - Samuel Edward Konkin III
"Anarchozionism" – Samuel Edward Konkin III
and personal advice.

Future editions, with more comprehensive information, are planned.

Pieces of the text new to the previous edition are underlined.

If the game is immoral, don't play by its rules.

1 Introduction

As mentioned earlier, this document is intended for people already convinced to the idea of Anarchism, Anarcho-capitalism and/or Agorism. If the reader is still not convinced or even is not familiar with these terms, there are suggested materials to begin with:

- "What Anarchy Isn't" Larken Rose:
odysee.com/@WakeUpMirror:3/LR-WAINp
- "Anatomy of the State" Murray N. Rothbard:
odysee.com/@MemoryoftheWorld:f6/121057
- "Government - The Biggest Scam in History Exposed" (5th edition) (2023) Etienne de la Boetie2:
encycency.com/politics/@livingfreedom/government-the-biggest-scam-in

2 Agorism

Agorism is the practice of counter-economics and the ideas associated with that practice. ... Agorism (based on the principle of counter-economics) promotes withdrawing from the state and using counter-economic activities to minimize what a person contributes to the state in the form of taxes, license fees, and so forth. ... The term was coined by Samuel Edward Konkin III, and comes from the classical Greek word 'agora' referring to an open place for assembly and market 'polis' (ancient Greek city-states). ...

All (non-coercive) human action committed in defiance of the State constitutes the Counter-Economy. ... Counter-Economics, the study and/or practice of all peaceful human action which is forbidden by the State ... People have discovered and acted in a Counter-Economic way without understanding what they are doing, why they are doing it, and even denying that they are doing it at all.

Understanding what you are doing usually helps, and applying Counter-Economics systematically and consistently maximizes both your profit and freedom. ... The basic law of Counter-Economics is to trade risk for profit.

Suppose you wish to do something Counter-Economic. To be specific, you can buy something for \$10,000 and sell it for \$20,000. Your regular overhead is \$5000. Your net return on investment is \$5000 (on an investment of \$15,000 that's 33%, extremely high) but, since there is a risk, how can you tell if the return is worth it?

Let's say the government claims it catches 20% of those doing what you want to do. If you are caught, the penalty would be a (maximum) fine of \$50,000 or six months in jail. Your "downside" risk, then, is 20% of \$50,000 or \$10,000. In this example, it would not be worth it: to gain \$5000 but risk losing \$10,000.

If the apprehension rate were 10% and the fine \$25,000, then your risk would be \$2500 for a gain of \$5000. As is obvious, you could get caught one time in ten, pay off your fines, and still come out way ahead. Of course, all these calculations make certain

assumptions about your subjective values.

You may fear risk to a pathological state and any risk is too much. Or you may love frustrating the State and take high risks for lower gain just for the fun of it.

Actually, a more realistic risk estimate would include the price of a lawyer to beat your charges and the probability of being convicted after apprehension. Assume that the retainer to your lawyer raises your overhead \$1000 per transaction. Now your payoff is \$4000, but the conviction rate (with plea bargaining and court delays) is only 20%. (Again, that is high in many jurisdictions; many cases are dropped long before they come to trial.) Now your risk, using our first figures, is 20% of 20% of \$50,000, or \$2000. With a payoff of \$4000, a loss of \$2000 would deter few entrepreneurs. If you would like a simple formula for your own business, try this:

$$\text{counter-economic payoff} = \text{profit} - \text{loss} = (\text{promised price}) - (\text{cost} - \text{overhead}) - ((\text{penalty or fine}) \times (\text{probability of arrest}) \times (\text{probability of conviction}))$$

If positive, go. If negative, don't go. Taking reasonable steps to conceal your activities from accidental discovery, learning to talk only to trusted friends, spotting poor risks or government agents all reduce your risk and increase your payoff. As you develop techniques to lower your risk, you will increase your counter-economic activities. More of them become profitable. ...

... applying Counter-Economics to all your actions and linking preferentially with others who do so creates an ever-bigger agora.

The path from here [the current existence of the state] to agora now becomes blindingly obvious. As more people reject the State's mystifications ... the Counter-Economy grows both vertically and horizontally. Horizontally, it involves more and more people who turn more and more of their activities toward the counter-economic; vertically, it means new structures

(businesses and services) grow specifically to serve the Counter-Economy (safe communication links, arbitrators, insurance for specifically “illegal” activities, early forms of protection technology, and even guards and protectors). Eventually, the “underground” breaks into the overground where most people are agorists, few are statist, and the nearest State enforcement cannot effectively crush them. ... Finally, one grows large enough to defend itself against the nearest State ... Others rally to it and those agorists staying “home” under States’ rule become ever-richer trading ports with the first agora condensations. The rapid collapse of State taxation ability at this point will push the State to rely even more on inflation to support itself. The Counter-Economists abandon fiat money ever-faster [in favour of cryptocurrencies, gold, silver, and barter] ... At the critical point when the protection companies can protect anyone who asks for a policy and is willing to pay for it, the State loses its monopoly of legitimized coercion. Once the power elite realizes that “it has come to this,” they

will throw all the force they have left at the agora. The protection companies will defend the agorists, the taxpayers will flee the State to the free market, the military will desert as the State runs out of (acceptable) pay and supplies for them, and the State will collapse.

... the collapse of the Soviet Union, due in no small part to Counter-Economics; the rise of Islamic terrorism; the return to a war-based (or, at least, war-accommodating) establishment economy; the scatter-shot legalization (but not decriminalization) of marijuana; the privatization (however meager) of space travel; the explosion of both computer encryption power and hackers’ ingenuity; the rise of digital currency à la Bitcoin; the ubiquity of surveillance systems; the abandonment of any vestige of mouthed support for Liberty by the elites of US political parties, corporate boards, and governments worldwide. All these events have only served to increase, not decrease, the size and scope of the Counter-Economy.

2.1 Counter-Economics tips

2.1.1 Five markets

	State approved	State banned unless done in state defined manner	State banned
MORAL	White Market: legal employment, legal business, taxed goods, regulated goods	Gray Market: employment of the books, untaxed goods, unregulated goods	Black Market: some drugs, some sexual activities, some weapons
IMMORAL	Pink Market: war / torture, taxation, imprisonment for victimless crimes, compulsory education	Red Market: murder, theft, rape, slavery	

$$\text{counter-economics} = \text{gray market} + \text{black market}$$

2.1.2 Some of the tools of Counter-Economics:

- grey market and black market
- dissidence both foreign and domestic
- tax resistance/tax evasion
- ignoring millions of regulations on business
- underground schools and shopping centers
- drug trafficking
- gold, silver, barter, cryptocurrencies
- smuggling people/illegal immigrants
- creative computing and secure information systems
- gun-running, gun smuggling, 3D printed guns
- 3D printing goods/products by yourself – that way there is no need to buy them and potentially pay ‘taxes’
- self-fulfillment and psychiatric resistance
- historical revisionism
- homesteading

2.1.3 To ease tax evasion:

- use cash
- don't use electronic bank payments
- use cryptocurrencies – especially those focused on privacy: Monero, Dash (CoinJoin), Zcash
- don't talk with others about what you do, unless you really can trust them
- barter is another useful option – exchange your products & services for products & services of others
- always try to not disclose your real, true information
- double your accountant books – if you know how; the most important thing for 'skimming' – be consistent;

"If you skim, skim the same amount each year. If you let one year go by without taking anything off and then take 20 percent the next, you're going to get caught. Even an IRS audit doesn't mean the end of the world. You are usually notified in advance. All you have to do is buy some new receipt books and make them fit your figures. As long as the receipts are numbered consecutively, and the figures jibe, you're O.K. In fact, the year I cheated the government was the year I was audited. The upshot was the inspector ended up congratulating me on what fine shape my records were in. Cheating the government is so easy it's pitiful."

- when exchanging fiat 'money' for cryptocurrencies, use crypto ATM, and cover your face with something – sunglasses, hat, surgical mask (use COVID as a pretext)

2.1.4 Suggested:

- z-library.se
- Hidden Wiki (TOR)
- odysee.com/@livingfreedom:3

2.2 If you can't be an agorist, manage your wealth wisely

Not always and not everyone can be a successful Agorist. Sometimes it's too risky or just plain impossible to buy or sell something in an ethical manner – without extortion (taxes) and not using state currency. If you can't use Counter-Economics in some situations try to spend you money wisely.

- The less you spend, the less VAT (Value-Added Tax) there will be extracted from your money for the state.
- If you have water, electricity and heat from the state-run facilities, the less you pay for them, the smaller portion of your money goes to the state.
- If, in case of some services, you can choose between something state-run and something private (for example: postal services, hospitals, school), then consider to pay even slightly bigger price for the private services and goods – only some part of money earned by them will go, in form of taxes, to the state then.
- Minimalism - if you have something that you no longer need – sell it. If you can't or don't want to sell it – give it to some friend or a member of your family but don't give it to the state-run charities or state libraries and so on.
- Minimalism – instead of spending your money on stuff that can be stolen from you by the state, spend them on experiences
- If you know (you are sure about it or there is a high probability for this) that your wealth will be stolen by the state mercenaries and you have no time to sell your possessions – destroy them. Let your stolen wealth not enrich thieves.

3 Vote with your feet

Go where you are treated best. Just as you can vote with your wallet, you also can vote with your feet. Relocate to a region / city: with smaller extortions (taxes), better climate, less 'regulations', more places to

hide in times of emergency etc.

Big cities are probably the worst places for freedom loving people, because their centralized nature let politicians impose more control over the population. It's much harder to harass a million people scattered over ten cities than a million concentrated in one.

3.1 The perils of anarchizism

From the earliest days of Ayn Rand's influence over the Libertarian Movement, frustrated activists have given up on their efforts to reform or revolt against the American State to seek the promised Gulch (some promised land / free zone). All the attempts (to the day) have failed. .. The villain in all these cases has been the State — always ready to move against the opening of a free society anywhere. Why hasn't the State's intervention been assumed from the beginning? ... Why should they believe that the very institution willing to follow them home,

into their pockets and bedrooms, would suddenly go "hands-off" because they crossed some imaginary line on a globe? ... As for me, anarchy begins at home.

Current examples of anarchozionism:

- a) seasteading (seasteading.org)
- b) The Free State Project (fsp.org)
- c) Liberland (liberland.org)
- d) network state (thenetworkstate.com)

The original article:

<https://odysee.com/@livingfreedom:3/anzionsek3:7>

4 Don't openly confront the authorities

1. Politicians, police and military often love: confrontations, shoot-outs, pulling their guns and arresting people, putting down a riot, big trials with lots of newspaper coverage. It gives them a chance to show how powerful they can really be.
2. They usually will be expecting open confrontation and will be prepared to deal with it (detention camps, secret police, riot-control equipment, and the army).
3. Once you have been identified as a troublemaker, you are probably going to be watched continually.
4. The secret freedom fighter has to be the invisible man, the person the government would never expect is spending his time planning how to hurt the government.
5. If you want to be a secret freedom fighter, you don't want to join any protest groups, stand on any street corners making speeches, or run with a mob throwing rocks at police vehicles. You want to look like a "good citizen."
6. If the state mercenaries (police, military) are directly threatening your life - try to defend yourself, but remember - they would probably have an advantage of force and they can unfortunately kill your that way or another.
7. If that heroic fight for your life would end in state court it is 99 % certain that the police would get an upper hand.
8. Open confrontation is always the last resolution.

5 Never help the government

Just because the secret freedom fighter is avoiding open confrontation doesn't mean he is so anxious to be a good citizen that he goes out of his way to cooperate with the bastards. What you want to do as much as is possible-is to ignore the government. Never voluntarily do anything that will help the government in any way.

Cheat on your tax payments, but do it cleverly. Buy illegal and black market goods if they are available. Poach game. Let your kids stay home from school every chance they can, especially if the teachers are handing out government propaganda.

Don't fill out forms or provide the government with any kind of information unless there is a government

official standing there insisting that you do so. Don't volunteer your services for anything the government is trying to do, no matter how worthwhile the project appears to be. Don't turn the heat down unless you're hot, and leave the lights on at night if you can afford the electricity. So the dam broke, and they are asking that every citizen turn out to help shore up the levy. A government that steals freedom shouldn't get any help. Let them pay to hire people to haul sandbags. Of course, in a totalitarian state, someone will probably show up at your door pointing a gun to make you volunteer. When that happens, don't argue. Go, but start thinking about how you can sabotage the whole operation and get away with it. You can look busy

while in actuality doing nothing at all, you can drop tools in the mud when nobody is looking, or look for tools lying around that can be broken lost, hidden, or stolen.

Never rat on a fellow citizen no matter what he is

doing. The more time spent on solving petty crimes, enforcing blackouts, eradicating the black market, and catching drug dealers, the less time there is to spend hunting you and people like you.

6 Confronted insist on your innocence and play ignorant

1. Many people put themselves in jail because of their big mouths - they talked too much.
2. If you are living in a totalitarian state and are avoiding your civic duties, sooner or later some government official is going to ask you why. The smart man in such a situation becomes the dumbest citizen in the country. He hasn't been reading the newspapers, he doesn't listen to the radio, he doesn't know a thing about what is going on. But he loves the government and loves doing his civic duty.
3. If he is asked a direct question, he gives as little information as possible.
4. He never gives any information that wasn't demanded.
5. He is never suggesting by his tone or his attitude that he is being anything but totally cooperative.
6. The clever cop, devious IRS agent, and successful detective have a little device - they will ask their victim a question. Nine times out of ten the guy in the jam can't stand the silence, so he starts talking, volunteering information. That's the information that puts him behind bars or adds another grand to his income-tax bill.
7. If you want to be a secret freedom fighter, learn to keep your mouth shut.
8. Keep a smile on your face and stare right back at the louse. Maybe he can't stand the silence either and he'll spill something that you might find useful.
9. If you are asked to explain why you didn't do something like file your tax return, hand in your guns, get a license to have a radio, or report your crop harvest, claim it was because you didn't know it was required and tell them you will start doing it right now.
10. Playing ignorant usually works, not because the local authority will ever believe you are innocent, but because he starts out with an assumption that you are dumb. Every authoritarian in the world believes that the average citizen is so stupid he is incapable of making his own decisions.
11. But that's not a point you want to debate when the government confronts you. That way they might not discover what you are really up to.

7 Get prepared before it happens

The ordinary survivalists won't be defending their caches of food, supplies, and weapons from roving bands of their neighbors. They will be fighting organized military units sent out by the government to confiscate such caches for "the common good."

... and do it quietly, secretly. Let the enemy (and even your neighbors) don't know about your preparations.

... city people will be able to play critical roles in the fight to get freedom back if they have prepared themselves to do so. In fact, the average city-dweller will probably be in a much better position to fight back than those living in a more rural setting because he will have more daily contact with the oppressors.

8 It's good for a freedom fighter to have

8.1 Weapons

1. Have a firearm and learn how to use it.
2. A new totalitarian government is going to try to round up all the weapons in private hands.
3. Collect at least one weapon that is not registered in your name and address.
4. If you bought all your weapons from a dealer and filled out the proper forms, you can still fog the issue the next time you move. Don't leave a forwarding address with the post office,

local officials, landlord, neighbors, or the new resident.

5. Don't forget to keep plenty of ammunition on hand, bought in small quantities at different places.
6. The best kind of firearm is one that is silenced.
7. Sniper rifle is better than a hand gun, because

it gives the freedom fighter a much needed distance. A bomb may be even better - it gives a distance and a time.

8. 3D printed guns are the new 'cool & sexy' thing in the neighborhood. For 3D printed guns a 3D printer is obviously needed and - in most cases - so called 'gun mill' (CNC machine) too (example: <https://ghostgunner.net/>).

8.1.1 For more materials on this subject

- The Gatalog: thegatalog.com
- Deterrence Dispensed – LBRY channel: odysee.com/@Deterrence-Dispensed
- Deterrence Dispensed – official website: deterrencedispensed.com
- Defense Distributed – website: defdist.org
- defcad – LBRY channel: odysee.com/@defcad
- Ctrl+Pew: odysee.com/@CTRLPew , ctrlpew.com
- 3D printers without KYC: 3dprintergobrrr.com

In case you can't or don't want to buy a 3D printer, you can make one by yourself, using quite simple materials. RepRap project may be helpful: reprap.org/wiki/RepRap

8.2 Equipment

You might not have any use now for a pair of wire cutters or a crowbar, but they could prove critically important once you start on the attack. Focus on tools like machetes and axes that can be converted into hand weapons. Don't forget rope and several kinds of glue. A small supply of gasoline is a must, provided you have a safe place to store it. A couple of those cans of white gas used in camp stoves would do just fine for use in making Molotov cocktails someday. And no one will be suspicious if you have such cans in your possession. It's a good idea to store rubber gloves, the kind sold to protect against dish washing and harsh cleansers. Latex gloves are even better. At some point as a freedom fighter, you will be handling things that you want to make sure don't carry your finger prints.

8.3 Information

1. Learn all you can (Internet, warning label on a can, etc.) about poisons, readily available chemicals, and household products.
2. Collect maps and engineering plans of roads, waterways, sewer lines, and water mains.
3. where the government installations and buildings in your city and county are located
4. the military bases in the area - what power, communications, and water lines service such installations
5. identify people who work in government buildings and what they do
6. in your apartment building - identify all the exits, especially basement windows and doors leading to the roof
7. Plan for getting back into your house or your apartment without being seen.
8. learn what poisonous plants grow wild in your area

8.4 Concealment

Identify places in your home, apartment building, and neighborhood where you can secrete supplies, weapons, plans, documents, and similar items. ... If you have a large yard or live in a rural area, establish stocked hiding places away from the house.

8.5 Physical fitness

Get in shape. ... Why have the freedom you have now if you can't enjoy it because of self-induced physical limitations? If you have to fight to get freedom back, fitness will be a weapon.

8.6 Censorship resistant technologies

- | | | |

| d) hive.io | e) status.im <u>status.app</u> | f) helium.com |
| g) zeronet.io | h) beechat.network | i) briarproject.org |
| j) mysterium.network | k) torproject.org | l) joinmobilizon.org |
| m) arweave.org | n) <u>ardrive.io</u> | o) ipfs.tech |
| p) <u>sarcophagus.io</u> | q) <u>althea.net</u> | r) <u>meshtastic.org</u> |
| s) <u>joinmastodon.org</u> | | |

9 Getting at them

1. Blowing up bridges and attacking military convoys - those kinds of operations require teams of fighters.
2. The secret freedom fighter always wants to work in secret and strike from ambush, hitting the enemy, then escaping to plan and act again.
3. You want to find things that you yourself can do without getting caught that will make somebody in the oppressor government unhappy, or hurt, or dead.
4. At the minimum, you want to give him extra work, make him look bad with his boss, and maybe divert his attention from what he is supposed to be doing for a while.
5. Better, you want to make him physically sick and mentally discouraged. Even better, you want to take him completely out of the picture for a day, or a week, or, best of all, forever.

9.1 Potential targets

- Foreign military occupation troops.
- National military forces, especially those engaged in the suppression of political dissidents or fighting guerrilla bands of openly committed freedom fighters. Officers first and then the noncoms.
- Government leaders, political authorities, and all members of their immediate staffs.
- The secret police or any police organization engaged in political repression and persecution.
- Ruling political party leaders and officials.
- Civilian government employees directly engaged in the repression of basic freedoms.
- Known collaborators.

The freedom fighter should always take care to ensure that the not targeted groups do not get injured.

9.2 Amateur arsenal and armory

- good quality bike or baseball helmets, sport protectors and sport goggles
- Molotov cocktail
- baseball bats and metal pipes
- spring loaded and kitchen knives
- axe, pitchfork
- lighter (with a long wand) + flammable aerosol = flamethrower
- gunpowder = charcoal + saltpetre + sulfur
- small, camouflaged drones, delivering explosives

9.3 On-the-job opportunities

A number of professions and occupations offer unique opportunities for inflicting damage on the enemy:

- military draftee
- government worker
- employee of hotel industry and gastronomy
- forced laborer
- government contractor

9.4 Assassination Politics

An assassination market is a prediction market where any party can place a bet (using anonymous electronic money and pseudonymous remailers) on the date of death of a given individual (usually a hated public figure - politician, government official, military commander), and collect a payoff if they "guess" the date accurately. This would incentivise assassination of individuals because the assassin, knowing when the action would take place, could profit by making an accurate bet on the time of the subject's death. Because the payoff is for accurately picking the date rather than performing the action of the assassin, it is substantially more difficult to assign criminal liability for the assassination.

Technologies like Tor, cryptocurrencies (especially privacy-focused), and decentralized prediction markets (like Polymarket) have enabled online assassination markets.

Video summary:

<https://odysee.com/@livingfreedom:3/Jim-Bell's-'Assassination-Politics:5>

Assassination Politics debate:

https://odysee.com/@livingfreedom:3/ap_debate_02:7

'Assassination Politics - past and present':

<https://ecency.com/politics/@livingfreedom/assassination-politics-past-and-present>

9.4.1 What the implementation of "assassination politics" might look like for a potential assassin

1. The decision on whether to perform the mission.
2. Checking the bets available on functioning prediction markets.
Examples:
a) polymarket.com
b) defillama.com/protocols/Prediction%20Market
c) potential prediction markets operating on the TOR network
3. Learning about the rules of specific prediction markets (whether operations can be blocked/censored, what methods and cryptocurrencies can be used to pay, etc.).
4. Gathering the knowledge needed to complete the mission.
5. Evaluating the chances of success and the potential profitability of the entire operation (e.g., how much USD will be won, in exchange for every dollar bet on the death of a politician, if that politician would die).
6. If the operation is regarded as profitable:
a) collection of the needed equipment
b) preparation of an accurate action plan and a backup plan, in case of problems
7. Placing a bet on a prediction market.
8. Execution of the operation.
9. (optional) Waiting some period of time to reduce the chance of detection.
10. Collecting the payoff from the prediction market.
11. "Laundering" crypto winnings. Most prediction markets operate on public, transparent blockchains, such as Ethereum, which means the need to cover up the traces of the transactions (e.g., by properly exchanging won ETH for Monero).

9.5 You don't have to kill someone to ruin his day

- A hotel maid can sprinkle a bit of itching powder in the clean underwear of a hotel guest she knows is in the target group.
- Cockroaches can be released in a gov. office.
- An irritating chemical can be slipped into the soap dispenser in a government building.
- Incriminating, or in general useful, information on the politicians can be found in emails, phone conversations recorded in restaurants, trash cans next to politicians' houses.
- Few old film negatives or an unexposed roll of film - wrap it in paper and light it. Throw that into the air intake. The building will have to be evacuated.
- The anonymous letter can do damage - they work even better if at least some of the information is true.

- Look for places where electrical machinery can be shorted out but won't blow until it is turned on. The best action is against machinery for which you are not accountable.
- Automobiles - critical nuts can be loosened, hydraulic lines weakened, wires cut through or shorted, tires damaged, all sorts of nasty things can be put into the gas tank.
- There are four kinds of IT sabotage. You can ... and so on ...

damage the hardware, steal, alter, damage or destroy data, alter or damage the software.

- In public toilet, in government building (departments, public schools, public universities etc.), that you visit:
flush a sock filled with fast-setting cement down the toilet;
leave some water running, some electric light on, etc.

10 Privacy is a camouflage

For more privacy:

- don't talk about your secret fight for freedom with others
- if you must talk - do it only with trustworthy people
- use cell phone/smartphone as rarely as possible - they are primarily tracking devices
- if you must use your mobile phone use secure and private messenger, for example Status (<https://status.im>) or Signal (<https://signal.org/>)
- when going out with your phone and not expecting any important calls - use Faraday phone case or at least turn on 'airplane mode'
- on your phone, use the lock screen option with a password
- encrypt the system disk on your laptop / desktop computer
- for more privacy-focused IT services check privacyguides.org, privacytools.io
- use VPN - preferably one with the possibility of crypto payments

11 The Freedom Cell Network

Freedom Cells are local, peer to peer groups typically consisting of 8 people. Cell members organize themselves in a decentralized manner with the goal of empowering group members through education, peaceful non-compliance, and the creation of parallel institutions. Think of it as your activist support network.
